How can you make the invisible valuable?

You know the challenge.

Buyers are prepared to invest in better-built green homes that have lower impact on the planet, and cost less to own and operate each day.

How can you prove your homes achieve those esoteric qualities, and make the invisible benefits of energy efficiency and environmental responsibility both visible and valuable?

Meet the residential energy design specialists at Homesol Building Solutions.

Driven by commitment

Driven by a passionate commitment to green building and sustainable living, Homesol is a “LEED-ing” provider of consulting, testing, labeling and third-party verification services for contractors, designers, homeowners and government agencies.

Homesol uses advanced building diagnostics tools including infrared thermal imaging.

Over its 12-year history, Homesol has delivered over 10,000 certified energy evaluations, including the first Passive House residence certification in Canada in 2011, and the first LEED Platinum certification for a multi-unit residence in the Province of Ontario in 2010.

Past awards include EnerQuality Evaluator of the Year, and Ottawa Construction News Readers’ Choice Award for Outstanding Commitment to Sustainable Development.

Better builders build with Homesol

Homesol advises over 35 builders and developers, including Urbandale, Monarch, Braebury, Richcraft, Claridge, Cardel, Valecraft, Metric, Larco, Holitzner, RND and many more.

Other clients include EnerQuality, Natural Resources Canada, Ontario First Nations Technical Services and Canada Green Building Council.

Homesol’s green building training and consulting services include:

- Certified Passive House Design
- LEED Canada for Homes
- ENERGY STAR® for New Homes
- GreenHouse Certified Construction
- R-2000 Certification
- Air Barrier Commissioning
- Infrared Thermography
- Energy Modeling & Design Services
- Air and Hydronic Systems Design

Homesol is a visionary, full-service consulting business that earns its clients’ loyalty and respect through a dedicated crew of trained sustainable buildings specialists and certified energy evaluators — reliable associates you can really count on!

Homesol’s residential energy design specialists deliver the consulting, testing and labeling certifications you need to sell your greener homes, from singles to mid-rise.

We don’t quote unrealistic rates or cut corners to get your business — we simply guarantee excellence.

Homesol works with Canada’s biggest and brightest energy stars!

From the ground up: the Homesol story

Homesol’s President Ross Elliott is not some ivory tower authority steeped in academic theory. His lifetime of hands-on expertise ranges from heritage carpentry to running his own green construction business.

Ross understands all aspects of homebuilding from the ground up. After university, he trained as an energy auditor in 1979 and as an R-2000 builder in 1983, the same year he obtained his Carpentry license.

Ross and his wife Kathryn have built their own super-insulated LEED Platinum home/café, a straw-bale design studio, and a unique bubble greenhouse on their two

acre sustainable rural living demonstration project/training centre in McDonalds Corners, Ontario.

Led by experience

Ross is a Certified Passive House Consultant and the Vice-President of Passive Buildings Canada. He is an accomplished trainer, and regularly presents at national and international green building conferences.

He is a LEED-AP, LEED Canada for Homes Green Rater, Certified Energy Advisor, Level II Thermographer, RASDT, RHDT, and co-founder and Director of CRESNET. He also served as a Director for EnerQuality for five years.

Ross Elliott, President of Homesol Building Solutions Inc.
